**DETAILED ACTION**

1. Claims 1-5, 7-11, 13 and 17-30 are pending in this application.
2. In the claims submitted on June 1, 2007, claims 17 and 18 have incorrect claim identifiers. They need to be changed to "withdrawn".

***Election/Restrictions***

3. Applicant's election of Group II, claims 22-30 in the reply filed on June 1, 2007, is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
4. Claims 1-5, 7-11, 13 and 17-21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on June 1, 2007.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 22-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Pawlowski (EP 1 033 624).

Pawlowski teaches a photosensitive composition. The composition includes a photoacid generator (starting at paragraph 0026) and hydroxystyrene resin (starting at paragraph 0041) which includes polymers meeting the limitations of the claims of the current application (including claims 22-25 and 27-29). Pawlowski does not explicitly state that the resin is water insoluble but the same polymers are taught which are taught by the current application and paragraph 0083 lists solvents for the composition and water is not listed. Paragraph 0068 teaches that a dye can be added with paragraph 0069 listing dyes which include those recited in the current application. Paragraph 0087 teaches uses for the composition including photoresist processing. Paragraph 0090 teaches radiation sources which are within the limitations recited in claims 26 and 30 of the current application.

Paragraph 0092 teaches heating at a temperature of 60-150° C after exposure.

Applicant argues that Pawlowski does not teach a crosslinkable composition. A composition is taught by Pawlowski which meets the limitations of the claims. Function arguments are being made rather than composition arguments. These claims do not include the thermal acid generator so those arguments do not need to be addressed.

### ***Conclusion***

**7. THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
